ENCODE Antibody Validation Documentation
Transcription factor: early growth response 1 (GeneID 1958)

From: Myers Lab, HudsonAlpha Institute for Biotechnology
Contact Person: Dr. Florencia Pauli (fpauli@hudsonalpha.org)

Transcription factor: EGR1 (GeneID 1958; ~57 kDa)

Antibody: EGR1 (588), Santa Cruz Biotechnology (sc-110)
Rabbit polyclonal, epitope mapping at the C-terminus of EGR1 of human origin

Validation 1: Immunoblot Analysis

For an antibody to meet ENCODE validation standards, a single band of the predicted size, or a band of no less than half the total signal, must be detected in a lane on a Western blot.

a. Vendor immunoblot analysis

Figure Legend: Western blot analysis of EGR1 expression in NIH/3T3 whole cell lysate.

b. Myers Lab immunoblot analysis

Western blot protocol
Whole cell lysates were immunoprecipitated using primary antibody, and the IP fraction was loaded on a 12% acrylamide gel and separated with a Bio-Rad PROTEAN II xi system. After separation, the samples were transferred to a nitrocellulose membrane using a Bio-Rad Trans-Blot Electrophoretic Transfer system. Standard western blot protocol was used to probe the membrane with the primary antibody (same antibody as used for IP), and an HRP-conjugated secondary antibody and SuperSignal West Femto solution (Thermo Scientific) were used to detect the immunoprecipitated proteins.

**Figure Legend:** EGR1 immunoblot: IP-western with sc-110 EGR1 antibody in whole cell lysate of K562. Heavy chain and light chain of IgG are indicated, and EGR1 band is indicated at ~80 kDa.
Validation 2: In progress
